

# Australian Photographic Digital Imaging Guidelines

## *Readme information*

1. On supplied CD/DVD's from Don Hildred Photographics you will find RGB Tiff files at 300 ppi.
2. These are ICC colour managed RGB files with Adobe RGB (1998) colour profile embedded in them.
3. All image editing was done on a monitor profiled to the international standards D65. Conformance to this standard was achieved with a measuring instrument. (Spyder2 Colorimeter) Any monitor that is correctly profiled to ICC (International Colour Consortium) standards will view the image(s) correctly.
4. Proofs supplied with this CD/DVD should be used as a guide only. They are intended for identifying files, assessing expressions, composition, etc and not for evaluating colour accuracy.
5. All files on the CD/DVD should be scanned for viruses, files verified, then backed up. We will not be held liable for any loss.

Based on guidelines provided by Australian Commercial + Media Photographers association.
